DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 12-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a) Claim 12: “low” has not been defined, and is therefore vague.

b) Claim 13: it is not clear what the limitations of the claim are in light of the language “...comprises one or more selected from the group consisting of...”. Part of the language is open and part is closed.

c) Claim 13: there is no antecedent basis for the blocking agent.

d) Claim 16: it is not clear what the limitations of the claim are in light of the language “...comprises one or more components selected from the group consisting of...”. Part of the language is open and part is closed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 12-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Mels et al (4668360).

'360 teaches applying an aqueous composition of an acrylic polymer with active groups and a blocked (blocked with lactam or other blockers) polyisocyanate formed from a polyol and aliphatic diisocyanates (2:35-7:48) to steel or other metals.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 17-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mels et al (4668360).

'360 is applied here for the reasons given above.

The qualities of being dirt-, scratch-, and hydrolysis-resistant are inherent in the coating composition, as the composition is very similar to that claimed by applicant.

Art Unit: 1762

'360 teaches that the curing of the composition is at 150-450 degrees F (7:38-44) (65-232 degrees C) for 30 minutes. This curing protocol overlaps with that claimed by applicant.

'360 does not disclose the weight per unit area of the coating, but it would have been obvious to one of ordinary skill in the art to have optimized the coating thickness through no more than routine experimentation, depending on the coating qualities desired.

'360 teaches that the coating can be applied by "any means known within the coating arts" (see Abstract), which would encompass the spray and other methods employed by the applicant.

Conclusion

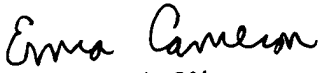

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
